INDUSTRIAL PROPANE SERVICE ANNOUNCES UL CERTIFICATION FOR AUTOGAS DISPENSERS

Byron, MI – June, 2018 – Industrial Propane Service Inc. (IPS) has recently announced that they have obtained the distinguished Underwriters Laboratory (UL) certification for their retail and commercial line of Gasboy AutoGas dispensing units.

These dispensing units are designed to dispense propane to vehicles equipped with propane-enabled combustion engines. This propane, referred to as AutoGas when used in these engines, is the leading alternative to gas and diesel fuel across the globe.

“We have been seeing more and more fleets turning to propane as a safe and economical alternative to gasoline and diesel fuels” commented IPS President Jeff Vandemark, “Having the UL approval means a lot to our customers and inspectors who are not familiar with these systems. As Propane AutoGas moves forward into public stations, UL will be required.”

The dispensing units are equipped with stainless steel panels, pull-away protection, as well as fuel management capabilities. They are available in single-side or dual-side configurations.

Along with being safe, they also offer features that make them secure and easy to use for the consumer. They are designed to function in a manner similar to how gasoline and diesel dispensing systems operate. Depending on the needs of the customer, these units can be customized equipped with several options and configurations.

“Our goal of being an industry leader in the markets we serve has been a hallmark of our business since our earliest days,” comments Mr. Vandemark. “We endeavor to be innovators in today’s competitive market, and our willingness to invest in this highly-coveted UL certification is just one way we can bring greater value to our customers.”
