INDUSTRIAL PROPANE SERVICE RELEASES A "CLEAR VISION ENCLOSURE" FOR PROPANE BOBTAILS

Byron, MI – March, 2018 – Industrial Propane Service Inc. (IPS) has recently released their "Clear Vision Enclosure" (CVE) - a bobtail enclosure designed to help propane retailers operate more safely and efficiently, resulting in higher profitability.

"We recognized a need in the marketplace for an enclosure that not only was lighter, corrosion-resistant, and longer-lasting," commented IPS Vice President Rob Vandemark, "but one that would also provide a safer working and driving environment for the operator of the bobtail."

Made out of a high-tensile strength polypropylene plastic, the CVE is up to 50% lighter than traditional enclosures. This stronger material offers the ability to withstand day-to-day abuse and corrosion. In addition, this lighter material allows the propane operator to carry more fuel, allowing you to operate more profitably.

The design of the enclosure fully covers the equipment and piping, providing protection as well as extending the life of the components. Despite being covered, the equipment can be accessed easily by removing six bolts and sliding the enclosure out on a heavy-duty rail system.

Along with being lighter, the CVE is only 43½" wide, compared to the 98" traditional enclosure. This guarantees better visibility while backing up, ultimately making it safer for the driver.

"Our goal of providing better and cheaper alternatives to our customers has been a hallmark of our business since our earliest days," comments Mr. Vandemark. "We endeavor to be innovators in this highly competitive market, and our CVE is just the product to help our operators be safer and more productive."
