

Cylinder Evacuation Systems

Features & Benefits

- No need to vent or flare propane cylinders.
- 100% of the liquid and vapor propane is recovered and transferred to the bulk storage tank.
- Can be designed to work with 1#, 20#, 33#, 100# or 420# cylinders.
- Can also be modified to evacuate domestic tanks and bobtail tanks.
- Protects the operator by keeping the propane contained.
- Increases profit by allowing all of the propane to be recovered and resold.
- Cuts down on time, reducing labor costs.
- Can evacuate multiple cylinders simultaneously to maximize efficiency.
- Can be custom-built to meet your specific needs.
- 320 gallon Quality Steel recovery tank
- Cylinder evacuation purge and vent piping.
- Removable 20# and 100# cylinder inverters.
- Operation valves for liquid/vapor transfers.
- RegO® sight flow back check.
- Recovery tank liquid level monitor.
- Explosion-proof electrical.
- Blackmer® compressor.
- Pressure gauges for recovery tank and cylinders.
