

Automated Cylinder Filling Systems

Reliable, accurate and repeatable. Here's how we do it:

- Designed for a high volume, fast-paced retail cylinder filling environments
- Programmable maximum fill weight per container size with automatic shut off feature
- Equipment can be utilized for flat rate or volume specific sales
- Mettler Toledo Scale's precision weighing allows for a maximum fill level without relying on the tank overfill protection device to stop the filling process
- Complete electrical package allows for minimal site electrical work being required. (1) Motor supply power circuit, (1) 120v control circuit and (1) site emergency stop circuit are all terminated at the electrical enclosure located at the rear of the skid
- The Hanbay electronic actuator mounted to the storage tank's 1 1/4" internal valve provides a no hassle electrical solution to emergency shut down requirements. No more cumbersome cables or need for replacing nitrogen tanks.
- Tank trim complete with RegO® multi valves and relief valves
- Many pump & motor options
- 3hp Marathon electric motor
- Full length welded I-Beam skid is primed & painted white
- Quality Steel 1000-gallon & 1990-gallon storage tanks
- Constructed with schedule 80 steel piping, forged steel fittings and Jomar ball valves
- Intuitive operator scale terminal allows for minimal steps being required to fill a cylinder
